Weeks 1 to 3 - Milestone Report

Dates: 18 January 2022 to 2 February 2022

Progress:

Looked for potential static analysis annotators, though it was difficult to find one that fit this project's requirements (will be explained more in the next milestone report). Did some more background reading from various sources, looking mainly for models and static analyzers to use. First meeting this semester with faculty mentor was the day after this milestone report, so not much to report before this.
